

**We are committed to fostering a spirit of co-creation in health and medical technologies and contributing to the health of people everywhere.**

Medical and Health Technology Development Support  
&  
Medical Device Regulatory Affairs Human Resources  
Development Corporation

**Health Tech Co-Creation Foundation**

## Foundation philosophy

We will contribute to the advancement of medical technology by promoting collaborative development of medical devices, such as industry-academia collaboration, medical-engineering collaboration, and IT collaboration. We will also train personnel who will take on the role of pharmaceutical specialists in order to ensure the early development and commercialization of medical devices.

## Business Details

- (1) Coordination of Foreign Medical Devices entering the Japanese market, including manufacturing, sales, or both
- (2) Human resource development project for medical device regulatory development
  - Operation of the "Pharmaceutical Affairs School" training course for new regulatory affairs personnel
  - "Medical Device Regulatory Affairs Coordinator" training projectCommonly known as the M-RAC (Medical Regulatory Affairs Coordinator) certification system
- (3) Medical device co-development support project (industry-academia collaboration, medical-engineering collaboration, IT collaboration)

Yoko Ide (Career Consultant)
- ◇URL: [www.htcf.or.jp](http://www.htcf.or.jp)

Representative Director  
Hideki Fujitsuka

We run a training program for medical device regulatory professionals called the "Regulatory Affairs School."

Now in its 21st year, the program has trained about 2,900 participants from more than 1,500 companies.

The school aims to quickly and effectively develop skilled regulatory staff and help companies strengthen their regulatory capabilities. Participants now include not only regulatory teams but also members from development and quality assurance.

The program is useful both for beginners and for those with experience who want to update their knowledge.
